

# JET Digital Service Platform

## Jet Digital Service Platform

carrier-grade software product of Service Delivery Platform class, for business processes management (connection, billing, delivery) between carriers and service providers, and services management, based on various technologies. Easy installation, quick time to market and high flexibility of independent addition of new services are just some of JDSP advantages.

Reduced time-to-market  
for new products

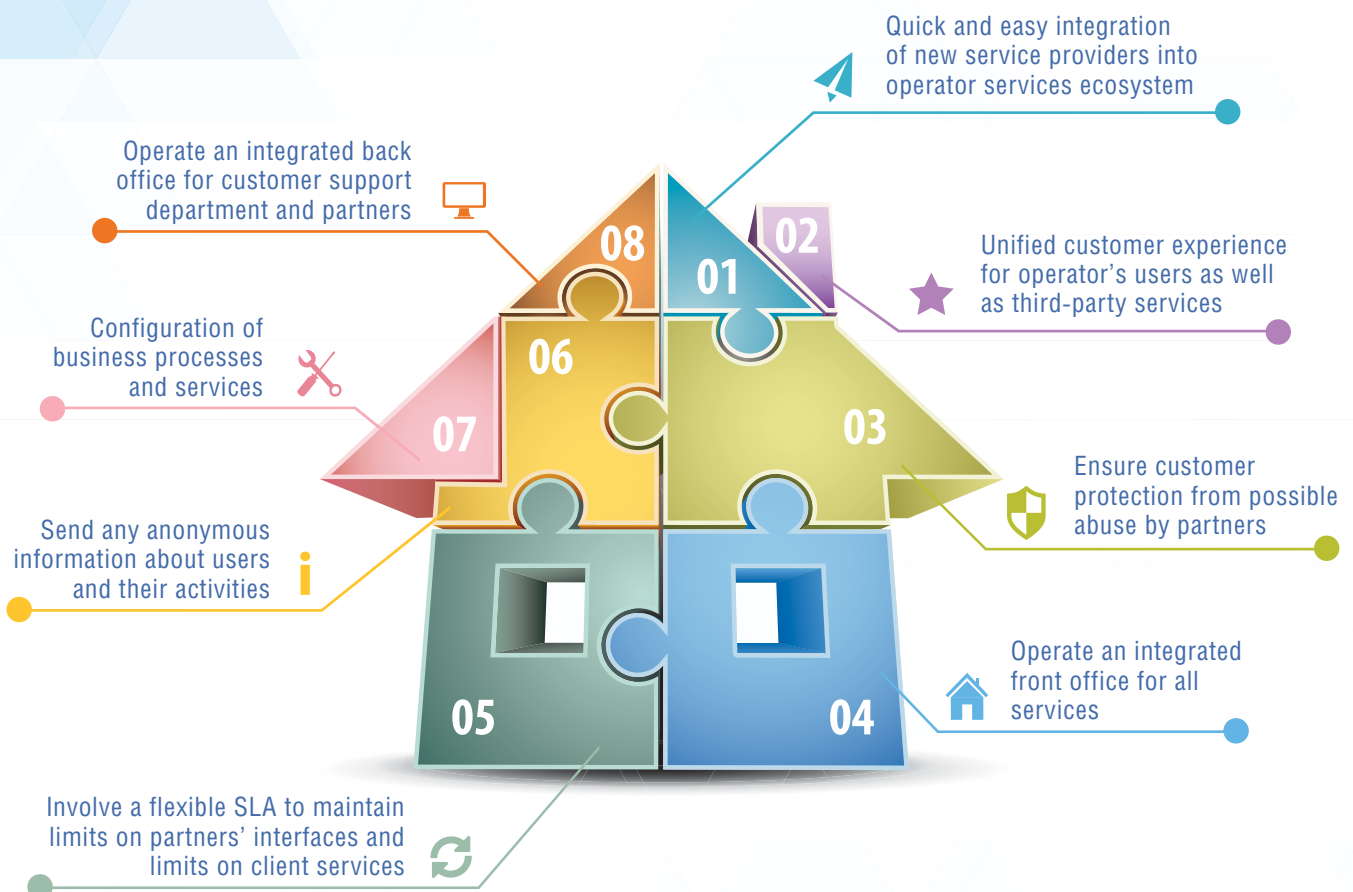

Improved operator's  
infrastructure usage

Increased  
customer loyalty

# JET Digital Service Platform

## ADVANTAGES

Enables short integration cycles, reduces technological risks and provides stable ecosystem of reusable services and common metadata

Unified user experience provided by JDSP and transparency of services leads to better operator loyalty

Allows monetization of existing OSS/BSS infrastructure by providing access to third-party and VAS service providers in controlled environment

Have a single interface for managing and monitoring providing products and services
